

Delivering data and precision when there's no room for error.

The healthcare field is going through an enormous technological shift. Electronic Health Records (EHR), the Nationwide Health Information Network (NHIN) initiative and Health Insurance Portability and Accountability Act (HIPAA) legislation demand better communication and protection of critical patient data. And you are expected to invest in technology even as you face pressures to reduce costs.

Your lifeline to a secure healthcare network

Your Time Warner Cable Business Class Account Representative can help you implement a data network solution to easily transfer and manage patient records, so physicians and administrators can concentrate on improved patient care. Our secure, highly redundant network is your lifeline to:

- **Electronic Health Records:** Our unique network infrastructure and regional ring topology provide unprecedented network bandwidth and the flexibility to scale as needed for EHR and NHIN.
- **Privacy Protection:** Leverage our network infrastructure and managed security solutions, so you can securely transmit patient information through a network and address healthcare regulations.
- **Pricing Flexibility:** Since our network is independent and wholly owned, we can provide the bandwidth you need with a simple, cost-effective data solution.

The Drive To Electronic Health Records

In an effort to improve the nation's healthcare system through technological innovation, the government expects widespread adoption of EHRs by 2014. In 2005 alone, use of EHR in office-based practices increased 24%.*

Solutions that can increase quality of care, even as you reduce costs

Time Warner Cable Business Class combines the engineering and technical expertise of a national communications leader with local service and support. Solutions that we can configure to meet your unique objectives include:

- **Ethernet Solutions:** Use Ethernet technology for connectivity between hospitals and remote offices. These solutions let you cost-effectively run networked applications.
- **Dedicated Internet Access:** Enjoy a dedicated fiber-optic connection for business-critical data transmissions on our high-capacity fiber network, all with the high availability, minimal latency and strict packet loss Service Level Agreements (SLAs) required by medical applications.
- **Managed Security:** Protect sensitive data with proactive security monitoring, intrusion detection, isolation and response, while freeing IT staff from this burden.
- **Branch Office Connectivity:** Bring high-speed Internet access and always-on network connectivity to dispersed offices that need to run high-bandwidth applications. Further secure your solution with available Static IP and automated remote backup.
- **Teleworker Solutions:** Give remote healthcare workers broadband access to your networks for more efficient record transfers, staff utilizations and workflow.
