

Ensuring your data is where it needs to be, so your products are, too.

To be successful in manufacturing these days, legacy networks between plants, engineers, procurement, sales, accounting, even customers and vendors, have to be upgraded. But that's easier said than implemented. You need scalable bandwidth to deploy Internet-based applications and data networks. This is especially difficult in rural areas that are not wired for broadband. And if the networks aren't fully utilized, your entire supply chain suffers.

Your lifeline to turning your network into an advantage

Your Time Warner Cable Business Class Account Representative can help you design a scalable data communications solution to effectively communicate with partners, increase productivity and reduce downtime. Our secure, highly redundant network is your lifeline to:

- **Upgrade Legacy Systems:** Collaborate and bring your partners together on an IP-based network that uses resilient ring technology to provide outstanding reliability, reducing strain on your operations and increasing productivity and profitability.
- **Speed to Market:** Match bandwidth to application requirements for a more expedited workflow and greater ability to move and store documentation.
- **Extending Your Network to More Partners:** Our wholly owned network goes beyond urban areas, so you can provide state-of-the-art connectivity and communications to outlying areas for greater speed and efficiency.

Manufacturing Need For Network Availability

Each hour of downtime can cost a manufacturer up to \$1.5 million in lost sales, employee productivity, supply chain disruption, service level penalties and damage to share value.*

Manufacturing a smoother supply chain

Time Warner Cable Business Class combines the engineering and technical expertise of a national communications leader with local service and support. Solutions that we can configure to meet your unique objectives include:

- **Ethernet Solutions:** Dedicated data networks between facilities provide cost-effective, high-capacity connectivity for your applications.
- **Dedicated Internet Access:** Enjoy a dedicated fiber-optic connection for business-critical data transmissions on our high-capacity fiber network, all with the high availability, minimal latency and strict packet loss Service Level Agreements (SLAs) required by complex financial, supply chain and Enterprise Resource Planning (ERP) applications.
- **Managed Security:** Protect sensitive data and systems with proactive security monitoring, intrusion detection, isolation and response, while freeing limited IT staff from this burden.
- **Branch Office Connectivity:** This solution provides Internet connectivity to plants, sales offices and engineering facilities that need to run high-bandwidth supply chain and custom applications.
